EUC PRINTING

Adjustable Stand Compatibility

Black steel slide display stand for indoor signage.

A2 and A1 graphic compatibility is described for this stand; custom sizes require a fit check.

The printing option uses one 4mm PVC hard board with single-sided printing.

Confirm the exact finished insert size and board fit before preparing artwork. The stand itself does not have a printed-artwork dieline.

This is a size and compatibility reference, not a cutting or assembly drawing. Check the actual display hardware before producing a replacement graphic.
